## Work Experience

**Sky** | Digital Developer

*Jan 2017 - Present*

Based in the Sky head office, part of the team responsible for digital marketing campaigns. I develop HTML5/JavaScript banners to be deployed in the Google DoubleClick Studio environment and work on internal tools to benefit the overall development team in our day to day work. My role also involves training and mentoring new starters on the development team, until they have the required knowledge to work on live creative briefs.

**Streeten Design** | Web Developer

*May 2015 - Dec 2016*

As sole web developer at Streeten Design, I was entirely responsible for the transformation of static Photoshop layouts into fully functional websites. In situations where a layout had not already been provided, I was entrusted to use my own creative skills to produce a design befitting the client.

As well as the obvious skills required to fulfil such a role in terms of design and the "look and feel" of a website (HTML, CSS, JavaScript, jQuery), my time was also spent on more technical aspects of certain projects. From using PHP and MySQL to retrieve information from the database to display on screen, to communicating with API's to update and retrieve data.

**Career Break**

*Feb 2012 - May 2015*

This time was spent travelling for a year, renovating my parents' home and educating myself for my new career path.

**IRIS Software Group** | Customer Support, then Technical Consultant

*Nov 2006 - Feb 2012*

---

## Education

**London South Bank University** | First class degree in BSc(Hons) Computing Studies *2003 - July 2006*

**John Ruskin College** | AVCE ICT - (BB) | Two AS Levels (B,E) | GCSE (C) *2001 - 2003*
